

Commission review brief

Blair, Trin & Emmie · Aug 1 – Sep 6, 2026 · prepared for commission sign-off

Reconciliation. 2,640 orders · \$84,876.22 across the three affiliates. These figures match a direct SliceWP aggregate exactly, per affiliate. Source is a read-only snapshot of production; no writes were made. Individual orders were traced end to end to confirm the repeat-customer and email flags.

What goes out to them

Affiliate	Orders	Earned	Earned with no click on their link	...of which their own customers	Share
Blair	1,403	\$40,555.56	\$24,599.83	\$21,950.77	89%
Trin	790	\$29,755.17	\$18,103.82	\$15,093.72	83%
Emmie	447	\$14,565.49	\$9,400.46	\$6,198.09	66%

The affiliate-facing PDFs lead on the second-to-last column: the money they earn from customers they originally brought in, returning later without clicking. Note Emmie's share is materially lower than Blair's or Trin's.

Cross-credit between the three (not in their PDFs)

Orders where the customer was lifetime-linked to one of the three but the commission was paid to another of them. 94 orders, \$3,247.98 in total. Their documents say only "another affiliate brought them" and never name anyone, but if all three compare notes this is what they would reconstruct.

Affiliate	Orders gained	Value gained	Orders lost	Value lost	Net
Blair	25	\$806.42	54	\$1,721.28	-\$914.86
Trin	20	\$741.65	37	\$1,424.62	-\$682.97
Emmie	49	\$1,699.91	3	\$102.08	+\$1,597.83

Emmie is a large net winner here and Blair and Trin are both net down. Nothing is being calculated incorrectly — last click beats a lifetime link, which is the documented rule. But this is the most likely thing to turn into a dispute, so it is worth having a position ready before the PDFs go out.

Orphaned lifetime links

887 customers are still lifetime-linked to affiliate accounts that no longer exist — almost all of them to a single deleted affiliate that has no visits and no commission history at all. In this period 54 orders worth \$2,094.95 were credited to Blair, Trin or Emmie over one of these dead links.

These links are worth cleaning up so they stop appearing in attribution logic. Until they are, a last-click win over one of them looks like a win over a real affiliate, which it is not.

Stale-click exposure

How long before each order the earning click happened, across all 2,640 orders.

When the click happened	Orders	Commission	Share
Same day as the click	1144	\$38,889.43	45.8%

When the click happened	Orders	Commission	Share
1–7 days after	396	\$14,479.26	17.1%
8–30 days after	514	\$17,778.08	20.9%
More than 30 days after	19	\$654.11	0.8%
No click on file (lifetime link)	567	\$13,075.34	15.4%
All orders	2,640	\$84,876.22	100.0%

1,268 orders worth \$39,451.17 were paid at full sale rate on a click at least a day old, or on no click at all. The affiliate-facing framing of this is "your link keeps earning", which is true. The other reading is that the programme pays a full 30–40% on repeat and direct traffic that would likely have converted anyway. If that is a rate conversation the business wants, it should be opened deliberately rather than raised by an affiliate first.

Email marketing — which attribution we use

The store can only see an email-driven order when Klaviyo's tracking token survives into the landing URL. It has no record of opens at all, and a customer who opens an email and returns later looks like direct traffic to us. Klaviyo's own attribution — the same model the email P&L runs on — sees roughly 3x as many.

How email orders are counted	Orders	Affiliate commission
Store-side only (tracking token on the landing page)	80	\$2,342.97
Klaviyo's own attribution (engaged with a send, then ordered)	257	\$9,012.45
...excluding orders where they arrived on their own link	208	\$7,127.66

The affiliate PDFs use the conservative last line, 208 orders and \$7,127.66, so we never claim an order the affiliate's own link brought in. Of Klaviyo's attributed orders, most show as "direct" on our side — that is the traffic that was invisible before. This should now reconcile against the email P&L, since it is the same attribution model.

Campaign or flow	Orders	Affiliate commission
Campaign Aug 12, 2026, 5:58 PM	24	\$1,594.88
New Testing Standards Aug 19, 2026, 9:58 PM	47	\$1,411.74
Browse Abandonment - Standard	33	\$1,088.98
Welcome Series - Customer v. Non-Customer	21	\$866.14
Abandoned Checkout Reminder (Email)	25	\$635.95
Discord 2 Campaign Sep 2, 2026, 5:50 PM	28	\$515.22
Campaign Aug 29, 2026, 5:57 PM	15	\$383.91
Campaign Aug 5, 2026, 3:46 PM	3	\$212.79
First Time Order Aug 14, 2026, 2:59 PM	6	\$164.48
First Time Order Aug 14, 2026, 2:59 PM (clone)	4	\$138.89

Method notes

- True Sciences ads and Klaviyo sends run through their own affiliate accounts. Traffic arriving on those accounts is credited to the channel it represents — paid ads or email — not counted as "another affiliate".

- A customer's origin is their *first* order: whoever brought them to the site the first time, whether or not that account still earns on them today.
- Every figure here regenerates from a read-only production pull, so any number can be re-derived or challenged line by line.
